

AMENDMENT TO THE CLAIMS

1. (Currently Amended) A casing of one of a cigarette and a smoking device, comprising: an empty mouthpiece (1) and one of a connected and a connectable empty envelope (2), the mouthpiece (1) within and detachable from the a cavity (4) of the envelope (2), at least a part of [[a]] the cavity (4) of the envelope (2) able to receive smoking material, a separating partition selectively penetrable by smoke and installed so that at least a part of in a second cavity (3) of the mouthpiece (1) is detachable from at least a part of at a position within the cavity (4) of the envelope (2), and overlapping at least a part of a cross section of the cavity (3) of the mouthpiece (1), the separating partition formed as a deformed part (5) of a wall of the empty mouthpiece (1), the deformed part (5) disposed at an end of the mouthpiece (1) within the cavity (4) of the envelope (2) and comprising a portion of the end extending across the second cavity (3) and contacting the opposing inner side wall of the second cavity (3), wherein clearances are formed on sides of the deformed part (5) between the deformed part (5) and the inner side wall of the second cavity (3).

Claims 2-20 (Canceled)

21. (Currently Amended) The casing according to claim [[20]] 1, wherein the deformed part (5) of the wall of the empty mouthpiece (1) is perforated (7).

Claims 22-23 (Canceled)

24. (Previously Presented) The casing according to claim 23, wherein a spacing insert (12) is installed in a part of the cavity (4) of the envelope (2).

25. (Currently Amended) A casing of one of a cigarette and a smoking device, comprising: an empty mouthpiece (1) and a connected empty envelope (2), a length of the empty mouthpiece (1) being one of equal to and greater than a second length of the empty envelope (2), the empty envelope (2) overlapping the empty mouthpiece (1) with an entire length, and the empty mouthpiece (1) and the empty envelope (2) displaceable relative to each other along a common longitudinal axis; and a separating partition disposed at a position within the mouthpiece (1) that is also within the envelope (2), the separating partition selectively penetrable by smoke and having a form of a perforated diaphragm (8) or a spiral insert (9) installed to overlap at least a partial cross section of a cavity (3) of the mouthpiece (1).

Serial No. 10/587,600

Claims 26-34 (Canceled)

35. (Previously Presented) The casing according to claim 25, further comprising a filter.

36. (Previously Presented) The casing according to claim 23, wherein the empty mouthpiece (1) and the empty envelope (2) are moveable relative to each other along a common longitudinal axis.

37. (Previously Presented) The casing according to claim 24, wherein the empty mouthpiece (1) and the empty envelope (2) are moveable relative to each other along a common longitudinal axis.

38. (Previously Presented) The casing according to claim 1, wherein a spacing insert (12) is installed in a part of the cavity (4) of the envelope (2).

39. (Canceled)

Serial No. 10/587,600

40. (Previously Presented) The casing according to claim 1, wherein a separating partition is selectively penetrable by the smoke and is made of a material with a low sorption capability.

41. (Previously Presented) The casing according to claim 1, wherein the empty mouthpiece (1) and the empty envelope (2) are moveable relative to each other along a common longitudinal axis.
